

We want to take our company **GREEN,**

Who manages the process? **but where do we start?**

What gains should we expect?

How do we get employees involved?

ECO-FACILITATORS HAS THE ANSWERS!

- Help your organization develop ideas and facilitate change to gain positive environmental changes.
- Changes are built within your current workflow, helping the company reduce its carbon footprint without jeopardizing client relationships.
- Build a plan around your staff and their ideas, encouraging internal buy-in and grass root support.
- Create clear goals, cost-effective solutions, and measurable results.
- Task assignment, tracking and follow-up to ensure positive impact.

It all starts with an Eco-Summit™

WHAT TO EXPECT FROM AN ECO-SUMMIT:

- Initial planning meeting with your management team to discuss process and expectations and appoint "Eco-Leaders" for your first Eco-Summit.
- Company-wide survey requesting your employees' thoughts on the current state of "green" programs including identification of areas working well and potential challenges for your Green Initiative.
- Within 30 days of survey, our team facilitates a full-day Eco-Summit with Eco-Leaders, to help you build your Eco-Measurable Accountability Plan (Eco-MAP) with five (5) quantifiable Key Environmental Improvements (KEIs) implemented in 90 days.
- Your company Eco-MAP is created and published and communicated to all your employees.
- Your Eco-Leaders guide priorities forward, manage the implementation process under our direction, and check in with us bi-weekly to discuss progress and solve any challenges.
- Upon completion, your company receives Eco-Certification that you completed your Eco-MAP.
- We support ongoing changes – if you'd like to continue to make your company greener, the next set of priorities is identified and a new Eco-MAP can be created if desired.
